

# WIFI 6

## The Ultimate In-Home WIFI Experience

### What is WIFI 6?

It's the next generation of WIFI with advanced technologies to make your internet connection faster and more efficient.

### Is WIFI 6 more secure?

Yes! All WIFI 6 certified routers are equipped with the new security protocol, WPA3. WPA3 makes it harder for hackers to crack passwords by constantly guessing them, and it makes some data less useful even if hackers manage to obtain it.

### What makes WIFI 6 faster?

The updated technology allows a WIFI 6 router to communicate with multiple devices at the same time, rather than broadcasting to one device, and then the next, and the next, etc. WIFI 6 will allow routers to communicate with up to eight devices simultaneously (older WIFI technology only supported communication with up to four devices). Think of these new technology improvements as adding delivery trucks to a fleet. You can send each truck in different directions to different customers. Before you only had four trucks and with WIFI 6, you now have eight!

### How fast is WIFI 6?

WIFI 6 isn't about top speeds. Instead of boosting the speed for individual devices, WIFI 6 is all about improving the network when a bunch of devices are connected. But to answer your question, WIFI 6 routers can support up to 9.8 Gbps.

### How do I get WIFI 6?

The short answer - update your devices. The first step is upgrading your router to one equipped with WIFI 6 technology (hint: Apex WIFI). Next, consider your connected devices (i.e. phones, laptops and tablets). New devices will come equipped with WIFI 6 technology, but your devices that are more than 2-3 years old are not likely equipped with the latest WIFI technology.
